

SAFETY JOINT

IMPACT

GENERAL DESCRIPTION

The Safety Joint is used in drilling, fishing, testing, washover or tubing strings when a releasing safety connection is needed. It is a two pieces tool with a coarse thread which allows speed and easy assembly and de-assembly during operations. It will be disengage by simple left rotation at 40% of tool's right-hand make-up torque.
O-Ring seals maintain internal and external pressure fluid.

USE

The Safety Joint is usually used during fishing operations, setting above the fishing tool and below jars or bumper subs.
