

SUPER JUNK MILL

MILLING

The Junk Mill is a high-performance milling tool designed to grind and remove metal debris and obstructions in the wellbore, such as stuck tools, casing fragments, or drill bits. It is used in tough environments where standard mills might not suffice, offering superior cutting power and durability.

Dressed OD	Top Pin Connection

USAGE RECOMMENDATIONS

The Junk Mill should be used with a robust circulation system to clear away milling debris efficiently.

It is often recommended to combine the tool with a **Fishing Magnet** or **Junk Basket** to collect any metallic debris left behind.

Stabilizers are also useful for ensuring tool stability during operation, allowing for more consistent cutting action and prolonging the life of the mill.

TYPES OF DEBRIS MILLED

- Broken drill bits
- Casing fragments
- Stuck tools
- Fishing equipment debris
- Miscellaneous metallic obstructions
